

Haini Wen

PhD Candidate in Pharmacokinetics & Pharmacodynamics

Uppsala University, Department of Pharmacy | wenhainipmx@gmail.com | [My Website](#) | [LinkedIn](#)

PROFILE & MOTIVATION

I am a PhD candidate in Pharmacokinetics and Pharmacodynamics at Uppsala University, graduating in mid-2027, with a strong track record in translational PBPK and PK/PD modeling for pulmonary and systemic drug delivery. My doctoral work carried out in collaboration with AstraZeneca and Karolinska Institutet, has deepened my passion for bridging preclinical and clinical research.

With additional experience spanning TMDD modeling of monoclonal antibodies, population PK, and drug-drug interaction modeling, I bring a broad quantitative toolkit to complex pharmacometric challenges. I am eager to apply my modeling expertise in an environment where PK/PD thinking drives meaningful decisions across the drug development pipeline.

EDUCATION

PhD in Pharmacokinetics and Pharmacodynamics 2023 – Present

Uppsala University, Sweden

MSc in Pharmaceutical Analysis and Quality Control 2012 – 2013

King's College London, United Kingdom

Graduated with Distinction · Lingard Prize: Best Student in Pharmaceutical Analysis

BSc in Pharmacy 2008 – 2012

Shanghai University of Traditional Chinese Medicine, China

RESEARCH EXPERIENCE

Pharmacometric Modeling for Antibiotic Therapies via Pulmonary Delivery Mar 2023 – Present

Uppsala University, Department of Pharmacy · Supervisors: Prof. Lena Friberg, Prof. Elin Svensson

- Established a translational PBPK model framework characterizing intrapulmonary PK in rats and humans after pulmonary delivery, in collaboration with AstraZeneca.
- Developing a predictive translation framework for gallium-based nanoengineered antimicrobial therapy targeting pulmonary delivery, in collaboration with Karolinska Institutet.

PBPK/PD Modeling of Drug–Drug Interactions Sep 2021 – Jan 2022

Shanghai Chest Hospital, Shanghai, China

- Evaluated bleeding risk increase due to dronedarone interactions using physiologically based PK/PD modeling.

TMDD Modeling of a Novel Monoclonal Antibody May 2013 – Sep 2013

Shanghai Chest Hospital, Shanghai, China · Consultancy in collaboration with GenSci Pharm

- Applied target-mediated drug disposition (TMDD) modeling to characterize the PK of a novel monoclonal antibody — a protein therapeutic — in monkeys, informing dose selection and PK sampling design for its Phase I clinical study.

PROFESSIONAL WORK EXPERIENCE

Senior Clinical Pharmacist Aug 2020 – Jan 2023

Department of Pharmacy, Shanghai Chest Hospital, Shanghai, China

- Established and developed the perioperative clinical pharmacy service in the cardiovascular surgery unit.
- Mentored and precepted new pharmacy staff, supporting clinical and professional development.

- In-charge pharmacist of multidisciplinary venous thrombosis clinic: individualized warfarin and novel anti-coagulant dosing; Medication Therapy Management.

Clinical Pharmacist

Jan 2014 – Jul 2020

Department of Pharmacy, Shanghai Shu Guang Hospital, Shanghai, China

TEACHING EXPERIENCE

Teaching Assistant

Mar 2023 – Present

Uppsala University, Department of Pharmacy

- Supervising master student dissertations.
- Delivering teaching sessions on Modelling of Biological Systems, Clinical Trial Methodology, and Pharmacokinetics.
- Co-developing a new bachelor-level Pharmacokinetics and Pharmacodynamics course.

Guest Lecturer, MSc Clinical Pharmacy

Mar 2023 – Present

Fudan University, China

- Delivered seminars on translational PK/PD modelling.

Teaching Assistant, Uppsala Pharmacometrics Summer School

Mar 2023 – Present

Uppsala University

- Delivering multiple hands-on practical sessions.
- Organized the summer school social programme (2023).

CONFERENCES & PRESENTATIONS

Oral: Informing sampling design for lung distribution studies using a pulmonary population PBPK model — ICAComp 2025, October

Poster: A pulmonary population PBPK model for sampling design evaluation — PAGE 2025, June

Poster: Translational PBPK modeling to predict human pulmonary kinetics after inhalation — PAGE 2024, June

Oral: Predicting drug-drug interaction with PBPK/PD modelling and optimal dosing of oral anti-coagulants with dronedarone — Asian Pharmacometrics Network Symposium 2022, November

SKILLS & LANGUAGES

Modelling Software

NONMEM, PK-Sim/OSP, SimCyp, Monolix

Programming

R (mrgsolve, rxode, Stan), Python; Machine Learning: scikit-learn, PyTorch (regression, classification, neural networks)

Languages

Mandarin (native) · English (fluent) · Swedish (intermediate)
